Excavation & Hauling

The Company has the full ability to carry out excavation works related to construction such as roads, buildings, etc., as well as the related backfill operations and transfer the remnants of excavation operations to the designated places.

Excavations are all works related to changing the natural features of the land, including (excavation, transportation, filling, settlement, compaction, and tamping).

Field of excavation works

- Establishments of all kinds. Special projects of all kinds.
- Government projects and public utilities. Dam works.
- Roads and airports.
- Everything related to infrastructure works.

Building construction excavation works

- Excavation works to prepare and set up the general site.
- Excavation works to reach the foundation level of the building.
- Backfilling, leveling and mounding works above the bases and behind the retaining walls.

Building construction excavation works

- Excavations by mechanical means (dozer - turx - reaper - bagger).
- Excavations by manual means (krick - dwarf).
- Excavations by blasting and resorting to it in an emergency in the event of the impotence of the previous means.

Transportation

We provide first class service anywhere you need for your logistic needs by pickup or delivery. We provide moving solutions locally inter-province, intra-province and coast-to-coast logistic solutions across.

Experienced Operator Truck Drivers

Our operators are a special breed of experienced drivers. Before partnering with us, they must pass our comprehensive screening process which includes DOT requirements and drug testing. They are meticulous with the maintenance of their trucks and equipment because their own reputation is on the line. That's why our drivers go the extra mile in delivering claim-free, accident-free loads on time. We stand by our drivers, knowing that their desire to succeed helps drive our service.

Infrastructure

Reef Diab Contracting Corporation is one of the institutions specialized in paving and asphaltting roads, as it has the best equipment and the latest devices with the latest technologies. There is also a team of specialized engineers at the highest level. As well, our Company owns the latest equipment for compacting roads during its construction, and this step is considered one of the most important in paving roads process.

Our Company also undertakes the paving of major and minor roads because of their important role in the country's economy.

Standards on which Reef Diab Contracting Establishment relies on the materials that make up the flexible paving layers

- 1- Taking into account the changing temperatures in order to withstand the asphalt mixtures.
- 2- Compatibility of the paving materials used with the design to resist cracks.
- 3- Studying the soil and its natural properties and treating it through cement, lime or any other stabilizer.
- 4- Our Company makes a base layer in order to avoid any shrinkage and to drain rainwater.
- 5- We also pay attention to this layer in order to speed up the completion of the construction process.

Oil Pipe

Sewage And Floods

The Water and Sanitation Department work on implementing infrastructure works for water and sewage networks, irrigation networks and rainwater drainage, in addition to operating and maintaining them, whether in the developed schemes for the private sector or government agencies. The department also constructs strategic water tanks, stations and all mechanical works related to these projects. The department approves the executive plans from the concerned authorities, approves materials, submits samples and examines them if necessary with the competent governmental supervision body. The work of implementing water and sewage networks and water transmission lines can be summarized as follows:

- 1: Strengthening water and sewage networks and water transmission lines**
- 2: Replacing water and sewage networks and water transmission lines.**
- 3: Implementation of all major networks concerned with feeding water schemes and linking sewage networks to government drains.**
- 4: Implementation of all works related to household water drainage on existing sewage lines.**
- 5: Connecting wells with water carrier lines to feed the desalination plants with their stock and all the consequences thereof.**
- 6: Implementation of water carrier lines of large diameters and all its accessories.**

Prefabricated and unprepared fences

We are specialized in the completion of galvanized, ordinary, ministerial and national networks under high-level engineering supervision. We have the best specialists in fencing government projects, roadblocks, private lands, poultry farms and crushers for the purpose of insurance and protection.

We install all types of agricultural networks of all sizes and heights required. We have an integrated team under the supervision of engineering and high quality, taking into account the prices, networks, farms, breaks, crushers, installation of new networks and maintenance of the old ones.

WE are specialized in the installation of networks of various sizes and areas as desired. We provide netting works in different configurations for guarding and security for farms and gardens.

We install nets and security fences in all governorates of the Kingdom. We install complete fences of networks (regular networks - ministerial nets - barbed wire networks) according to customer requests.

All grilles are made of original iron, with holes and heights suitable for customer requests. We install networks for lands, gardens, homes, playgrounds, security, farm fencing and building
